Version Info

| Date | Version | Author | Comments/Changes |
|------------|---------|-----------|--|
| 2014.6.27 | 0.1 | XuJingjie | Draft |
| 2014.7.11 | 0.11 | XuJingjie | Unvarnished transmission added |
| 2014.8.12 | 0.15 | XuJingjie | 1. Added Timeout and IP settings for AP |
| | | | 2. Edited description for server functions |
| | | | 3、Support DNS |
| | | | |
| 2014.9.25 | 0.18 | XuJingjie | 1. Added upgrade through network |
| | | | 2、Added CWLAP |
| 2014.11.10 | 0.19 | XuJingjie | Added UDP |
| 2014.11.27 | 0.20 | XuJingjie | 1. Added set and get APIP/APMAC/STAIP |
| | | | /STAMAC |
| | | | 2. Added start and stop DHCP |

| | | 6.2.8 | AT+ CIPMODE – Set transfer mode | 20 |
| | | 6.2.9 | AT+ CIPSTO – Set server timeout | 21 |
| | | | AT+ CIUPDATE – Update through network | |
| | | 6.2.11 | +IPD – Receive network data | 22 |

1 Overview

This is the documentation for Espressif AT command instruction set and usage.

Instruction set is divided into: Basic AT commands, Wifi function, AT commands,

TCP / IP Toolbox AT commands.

Note: Please make sure that correct BIN(\esp_iot_sdk\bin\at) is already in the chip (ESP8266) before the AT commands listed in this documentation can be used.

2 Instruction Description

Each instruction set contains four types of AT commands.

| Type | Instruction Format | Description |
|---------|----------------------|---|
| Test | AT+ <x>=?</x> | Query the Set command or internal parameters |
| | | and its range values. |
| Query | AT+ <x>?</x> | Returns the current value of the parameter. |
| Set | AT+ <x>=<></x> | Set the value of user-defined parameters in commands and run. |
| Execute | AT+ <x></x> | Runs commands with no user-defined parameters. |

Note:

- 1. Not all AT instruction has four commands.
- 2. [] = default value, not required or may not appear
- 3. String values require double quotation marks, for example:

AT+CWSAP="ESP756190","21030826",1,4

- 4. Baud rate = 115200
- 5. AT instruction ends with "\r\n"

3 AT Instruction Listing

| Instructions | Description |
|--------------|---|
| Basic | |
| AT | Test if AT startup |
| AT+RST | Restart |
| AT+GMR | View version info |
| AT+GSLP | Enter deep-sleep mode |
| ATE | AT commands echo |
| Wi-Fi | |
| AT+CWMODE | WIFI mode (station/softAP/station+softAP) |
| AT+CWJAP | Connect to AP |
| AT+CWLAP | Lists available APs |
| AT+CWQAP | Disconnect from AP |
| AT+CWSAP | Set parameters under AP mode |
| AT+CWLIF | Get stations' ip which are connected to ESP8266 |
| | softAP |
| AT+CWDHCP | Enable/Disable DHCP |
| AT+CIPSTAMAC | Set mac address of ESP8266 station |
| AT+CIPAPMAC | Set mac address of ESP8266 softAP |
| AT+CIPSTA | Set ip address of ESP8266 station |
| AT+CIPAP | Set ip address of ESP8266 softAP |
| TCP/IP | |
| AT+CIPSTATUS | Get connection status |
| AT+CIPSTART | Establish TCP connection or register UDP port |
| AT+CIPSEND | Send data |
| AT+CIPCLOSE | Close TCP/UDP connection |
| AT+CIFSR | Get local IP address |
| AT+CIPMUX | Set multiple connections mode |
| AT+CIPSERVER | Configure as server |
| AT+CIPMODE | Set transmission mode |
| AT+CIPSTO | Set timeout when ESP8266 runs as TCP server |
| AT+CIUPDATE | For OTA (upgrade through network) |
| Data RX | |
| +IPD | Data received from network |

4 Basic AT Instruction Set

4.1 Overview

| Basic | | |
|-------------|-------------------------|-------|
| Instruction | Description | |
| AT | Test AT startup | |
| AT+RST | Restart module | |
| AT+GMR | View version info | |
| AT+GSLP | Enter deep-sleep mode | X V Y |
| ATE | AT commands echo or not | |

4.2 Instructions

4.2.1 AT – Test AT startup

| AT – Test AT start | up |
|--------------------|-------------------------|
| Type: execute | Response: |
| Instruction: | |
| AT | OK |
| AI | Param description: null |

4.2.2 AT+RST – Restart module

| AT+RST – Restart module | | |
|-------------------------|-------------------------|--|
| Type: execute | Response: | |
| Instruction: | | |
| AT+RST | OK | |
| A1+KS1 | Param description: null | |

4.2.3 AT+GMR – View version info

| AT+GMR – View version info | | |
|----------------------------|--|--|
| Type: execute | Response: | |
| Instruction: | <number></number> | |
| AT+GMR | OK | |
| AI+GNIK | Param description: | |
| | < number > version info, length: 8 bytes | |

| Note | For example, response is 0017xxxxxx, then 0017 means the |
|------|--|
| | AT version. |

4.2.4 AT+GSLP – Enter deep-sleep mode

| AT+GSLP – Enter deep-sleep mode | | |
|---------------------------------|--|--|
| Type: set | Response: | |
| Instruction: | <time></time> | |
| AT+GSLP= <time></time> | OK | |
| A1+GSLF=\unite> | Param description: | |
| | < time > ms, set the sleep time of ESP8266 in ms. | |
| | ESP8266 will wake up after X ms in deep-sleep. | |
| Note | Hardware has to support deep-sleep wake up (XPD_DCDC | |
| | connects to EXT_RSTB with 0R). | |

4.2.5 ATE – AT commands echo

| ATE – AT commands echo |) |
|------------------------|--------------------|
| Type: set | Response: |
| Instruction: | |
| ATE | OK A |
| AIL | Param description: |
| | ATEO: Disable echo |
| | ATE1 : Enable echo |

5 WIFI functions

5.1 Overview

| WIFI | |
|--------------|---|
| Instruction | Description |
| AT+CWMODE | WIFI mode (station/softAP/station+softAP) |
| AT+CWJAP | Connect to AP |
| AT+CWLAP | Lists available APs |
| AT+CWQAP | Disconnect from AP |
| AT+CWSAP | Set parameters under AP mode |
| AT+CWLIF | Get station's ip which is connected to ESP8266 softAP |
| AT+CWDHCP | Enable/Disable DHCP |
| AT+CIPSTAMAC | Set mac address of ESP8266 station |

| AT+CIPAPMAC | Set mac address of ESP8266 softAP |
|-------------|-----------------------------------|
| AT+CIPSTA | Set ip address of ESP8266 station |
| AT+CIPAP | Set ip address of ESP8266 softAP |

5.2 Instructions

5.2.1AT+CWMODE - WIFI mode

| AT+CWMODE - WIFI mode (station/softAP/station+softAP) | | |
|---|---|--|
| Type: test | Response: | |
| Function: | +CWMODE:(value scope of <mode>)</mode> | |
| Get value scope of wifi mode. | | |
| Instruction: | OK | |
| AT+CWMODE=? | Param description: | |
| AT+CWMODE=: | <mode>1 means Station mode</mode> | |
| | 2 means AP mode | |
| | 3 means AP + Station mode | |
| Type: query | Response: | |
| Function: | +CWMODE: <mode></mode> | |
| Query ESP8266's current wifi | | |
| mode. | OK | |
| Instruction: | Param description: | |
| AT+CWMODE? | The same as above. | |
| ATTE WMODE. | y | |
| Type: set | Response: | |
| Function: | | |
| Set ESP8266 wifi mode | OK | |
| Instruction: | Param description: | |
| AT+CWMODE= <mode></mode> | The same as above. | |

5.2.2AT+CWJAP - Connect to AP

| AT+CWJAP – Connect to AP | |
|-------------------------------------|---------------------------------|
| Type: query | Response: |
| Function: | + CWJAP: <ssid></ssid> |
| Query AP's info which is connect by | |
| ESP8266. | OK |
| Instruction: | Param description: |
| AT+ CWJAP? | <ssid> string, AP's SSID</ssid> |

乐鑫信息科技 Espressif Systems

ESP8266EX AT Instruction Set

| Type: set | Response: |
|---|-----------------------------------|
| Function: | |
| Set AP's info which will be connect | OK |
| by ESP8266. | ERROR |
| Instruction: | Param description: |
| AT+ CWJAP = <ssid>,< pwd ></ssid> | <ssid> string, AP's SSID</ssid> |
| A1+ CWJAF = \ssiu>, \pwu> | <pwd> string, MAX: 64 bytes</pwd> |

5.2.3AT+CWLAP – List available APs

| AT+CWLAP - Lists available APs | | |
|---------------------------------------|--|--|
| Type: set | Response: | |
| Function: | + CWLAP: <ecn>,<ssid>,<rssi>,<mac></mac></rssi></ssid></ecn> | |
| Search available APs with | A Y | |
| specific conditions. | OK | |
| Instruction: | ERROR | |
| AT+ CWLAP = | Param description: The same as below. | |
| <ssid>,< mac >,<ch></ch></ssid> | | |
| Type: execute | Response: | |
| Function: | + CWLAP: <ecn>,<ssid>,<rssi>,<mac></mac></rssi></ssid></ecn> | |
| Lists all available APs. | | |
| Instruction: | OK | |
| AT+CWLAP | ERROR | |
| ATTEWER | Param description: | |
| | < ecn >0 OPEN | |
| | 1 WEP | |
| | 2 WPA_PSK | |
| | 3 WPA2_PSK | |
| | 4 WPA_WPA2_PSK | |
| | <ssid> string, SSID of AP</ssid> | |
| | <rssi> signal strength</rssi> | |
| | <mac> string, MAC address</mac> | |

5.2.4AT+CWQAP – Disconnect from AP

| AT+CWQAP - Disconnect from AP | |
|-------------------------------|--------------------|
| Type: test | Response: |
| Function: | |
| Only for test | OK |
| Instruction: | Param description: |

| AT+CWQAP=? | |
|---------------------|--------------------|
| Type: execute | Response: |
| Function: | |
| Disconnect from AP. | OK |
| Instruction: | Param description: |
| AT+ CWQAP | |

5.2.5AT+CWSAP – Configuration of softAP mode

| AT+ CWSAP – Configurat | ion of softAP mode | |
|--|--|--|
| Type: Query | Response: | |
| Function: | + CWSAP: <ssid>,<pwd>,<chl>,<ecn></ecn></chl></pwd></ssid> | |
| Query configuration of | Param description: | |
| softAP mode. | The same as below. | |
| Instruction: | The same as core in | |
| AT+ CWSAP? | | |
| Type: Set | Response: | |
| Function: | | |
| Set configuration of | OK | |
| softAP mode. | ERROR | |
| Instruction: | Note: This CMD is only available when softAP mode | |
| AT+ CWSAP= | enable, and need to follow by AT+RST to make it works. | |
| AITCWSAI | Param description: | |
| <ssid>,<pwd>,<chl>,</chl></pwd></ssid> | <ssid> string, ESP8266 softAP' SSID</ssid> | |
| SSIU, pwu, ciii, | <pwd> string, MAX: 64 bytes</pwd> | |
| <ecn></ecn> | <chl> channel id</chl> | |
| CCII | < ecn >0 OPEN | |
| | 2 WPA_PSK | |
| | 3 WPA2_PSK | |
| | 4 WPA_WPA2_PSK | |

5.2.6AT+CWLIF – IP of stations

| AT+ CWLIF - ip of stations which are connected to ESP8266 softAP | |
|--|--------------------|
| Type: execute | Response: |
| Function: | <ip addr=""></ip> |
| Get ip of stations which | |
| are connected to | OK |
| ESP8266 softAP | Param description: |

Instruction: <ip addr> ip address of stations which are connected to ESP8266 softAP

5.2.7AT+CWDHCP - Enable/Disable DHCP

| AT+ CWDHCP – Enable/Disable DHCP | |
|------------------------------------|---------------------------------|
| Type: set | Response: |
| Function: | |
| Enable/Disable DHCP. | OK |
| | Param description: |
| Instruction: | <mode></mode> |
| AT+CWDHCP= <mode>,<en></en></mode> | 0 : set ESP8266 softAP |
| ATTEMBLE = \mode/, \en/ | 1 : set ESP8266 station |
| | 2 : set both softAP and station |
| | <en></en> |
| | 0 : Enable DHCP |
| | 1 : Disable DHCP |

5.2.8AT+CIPSTAMAC – Set mac address of station

| AT+ CIPSTAMAC – Set mac address of ESP8266 station | |
|--|--|
| Type: query | Response: |
| Function: | +CIPSTAMAC: <mac></mac> |
| Get mac address of ESP8266 | |
| station. | OK |
| Instruction: | Param description: |
| AT+CIPSTAMAC? | <mac> string, mac address of ESP8266 station</mac> |
| ATTCH STAMAC: | |
| Type: set | Response: |
| Function: | |
| Set mac address of ESP8266 | OK |
| station. | Param description: |
| Instruction: | <mac> string, mac address of ESP8266 station</mac> |
| AT+CIPSTAMAC= <mac></mac> | |

5.2.9AT+CIPAPMAC - Set mac address of softAP

| AT+ CIPAPMAC – Set mac address of ESP8266 softAP | |
|--|---|
| Type: query | Response: |
| Function: | +CIPAPMAC: <mac></mac> |
| Get mac address of ESP8266 | |
| softAP. | OK |
| Instruction: | Param description: |
| AT+CIPAPMAC? | <mac> string, mac address of ESP8266 softAP</mac> |
| Type: set | Response: |
| Function: | |
| Set mac address of ESP8266 | OK |
| softAP. | Param description: |
| Instruction: | <mac> string, mac address of ESP8266 softAP</mac> |
| AT+CIPAPMAC= <mac></mac> | |

5.2.10 AT+ CIPSTA – Set ip address of station

| AT+ CIPSTA – Set ip address of ESP8266 station | |
|--|---|
| Type: query | Response: |
| Function: | +CIPSTA: <ip></ip> |
| Get ip address of | |
| ESP8266 station. | OK |
| Instruction: | Param description: |
| AT+CIPSTA? | <ip> string, ip address of ESP8266 station</ip> |
| AT+CITSTA: | |
| Type: set | Response: |
| Function: | |
| Set ip address of | OK |
| ESP8266 station. | Param description: |
| Instruction: | <ip> string, ip address of ESP8266 station</ip> |
| ATI CIDCTA - sins | |
| AT+CIPSTA= <ip></ip> | |

5.2.11 AT+ CIPAP – Set ip address of softAP

| AT+ CIPAP – Set ip address of ESP8266 softAP | |
|--|-------------------|
| Type: query | Response: |
| Function: | +CIPAP: <ip></ip> |

| Get ip address of | |
|---------------------|--|
| ESP8266 softAP. | OK |
| Instruction: | Param description: |
| AT+CIPAP? | <ip> string, ip address of ESP8266 softAP</ip> |
| Type: set | Response: |
| Function: | |
| Set ip address of | OK |
| ESP8266 softAP. | Param description: |
| Instruction: | <ip> string, ip address of ESP8266 softAP</ip> |
| AT+CIPAP= <ip></ip> | |

6 TCP/IP Related

6.1 Overview

| TCP/IP | |
|---------------|---|
| Instruction | Description |
| AT+ CIPSTATUS | Get connection status |
| AT+CIPSTART | Establish TCP connection or register UDP port |
| AT+CIPSEND | Send data |
| AT+CIPCLOSE | Close TCP/UDP connection |
| AT+CIFSR | Get local IP address |
| AT+CIPMUX | Set multiple connections mode |
| AT+CIPSERVER | Configure as server |
| AT+CIPMODE | Set transmission mode |
| AT+CIPSTO | Set timeout when ESP8266 runs as TCP server |

6.2 TCP/IP

6.2.1AT+ CIPSTATUS – Information about connection

| AT+ CIPSTATUS – Information about connection | |
|--|--|
| Type: execute | Response: |
| Function: | STATUS: <stat></stat> |
| Get information about | + CIPSTATUS: <id>,<type>,<addr>,<port>,<tetype></tetype></port></addr></type></id> |
| connection. | |
| Instruction: | OK |
| AT+ CIPSTATUS | Param description: |
| AT+ CIPSTATUS | <stat> 2: Got IP</stat> |
| | 3: Connected |
| | 4: Disconnected |
| | <id>id> id of the connection (0~4), for multi-connect</id> |
| | <type> string, "TCP" or "UDP"</type> |
| | <addr> string, IP address.</addr> |
| | <port> port number</port> |
| | <tetype> 0: ESP8266 runs as client</tetype> |
| | 1: ESP8266 runs as server |

6.2.2AT+CIPSTART – Start connection

| AT+CIPSTART – Establish TCP c | onnection or register UDP port, start connection |
|---|--|
| Type: test | Response: |
| Function: | 1) If AT+CIPMUX=0 |
| Get the information of param. | +CIPSTART:(<type>),(<ip< th=""></ip<></type> |
| Instruction: | address>),(<port>)[,(<local port="">),(<mode>)]</mode></local></port> |
| AT+CIPSTART=? | +CIPSTART:(<type>),(<domain< th=""></domain<></type> |
| AI+CIPSIARI=: | name>),(<port>)[,(<local port="">),(<mode>)]</mode></local></port> |
| | |
| | OK |
| | 2) If AT+CIPMUX=1 |
| | +CIPSTART:(id),(<type>),(<ip< th=""></ip<></type> |
| | address>),(<port>)[,(<local port="">),(<mode>)]</mode></local></port> |
| | +CIPSTART: (id), (<type>),(<domain< th=""></domain<></type> |
| | name>),(<port>)[,(<local port="">),(<mode>)]</mode></local></port> |
| | |
| | Param description: null |
| Type: Set | Response: |
| Function: | OK |
| Start a connection as client. | or |
| Instruction: | ERROR |
| | If connection already exists, returns |
| 1)Single connection | ALREAY CONNECT |
| (+CIPMUX=0) | Y |
| (+CII WOX=0) | Param description: |
| AT+CIPSTART= | <id>0-4, id of connection</id> |
| AI+CIISIAKI- | <type> string, "TCP" or "UDP"</type> |
| <type>,<addr>,<port></port></addr></type> | <addr> string, remote ip</addr> |
| cype, audi, ports | <port> string, remote port</port> |
| [,(<local port="">),(<mode>)]</mode></local> | [<local port="">] for UDP only</local> |
| [,(\local pol (\rangle),(\local mode\)] | [<mode>] for UDP only</mode> |
| | 0 : destination peer entity of UDP will not change. |
| 2)Multiple connection | 1 : destination peer entity of UDP can change once. |
| (+CIPMUX=1) | 2 : destination peer entity of UDP is allowed to |
| AT+CIPSTART= | change. |
| | NT / |
| <id><id><type>,<addr>,<port></port></addr></type></id></id> | Note: |
| | [<mode>] can only be used when [<local port="">] is</local></mode> |
| [,(<local port="">),(<mode>)]</mode></local> | set. |
| | |

6.2.3AT+CIPSEND - Send data

| AT+CIPSEND – Send data | |
|----------------------------------|--|
| Type: test | Response: |
| Function: | |
| Only for test. | OK |
| Instruction: | Param description: |
| AT+CIPSEND=? | null |
| Type: Set | Wrap return ">" after set command. Begins receive of |
| Function: | serial data, when data length is met, starts transmission |
| Set length of the data that will | of data. |
| be sent. For normal send. | |
| Instruction: | If connection cannot be established or gets |
| | disconnected during send, returns |
| 1)For single connection: | ERROR |
| (+CIPMUX=0) | If data is transmitted successfully, returns |
| AT+CIPSEND= <length></length> | SEND OK |
| | Note: This CMD |
| | Param description: |
| 2) For multiple connection: | <id>ID no. of transmit connection</id> |
| (+CIPMUX=1) | <length> data length, MAX 2048 bytes</length> |
| AT+CIPSEND= | |
| <id>,<length></length></id> | |
| Type: execute | Response: |
| Function: | |
| Send data. For unvarnished | Wrap return ">" after execute command. Enters |
| transmission mode. | unvarnished transmission, 20ms interval between each |
| Instruction: | packet, maximum 2048 bytes per packet. When single |
| AT+CIPSEND | packet containing "+++" is received, it returns to |
| TIT I CIT DESTRO | command mode. |
| | This command can only be used in unvarnished transmission mode which require to be single connection mode. |

6.2.4AT+CIPCLOSE - Close TCP or UDP connection

| AT+CIPCLOSE - Close TCP or UDP connection | |
|---|-----------|
| Type: test | Response: |
| Function: | |

| Only for test. | OK |
|----------------------------|---|
| Instruction: | |
| AT+CIPCLOSE=? | |
| Type: Set | Response: |
| Function: | No errors, returns |
| Close TCP or UDP | OK |
| connection. | |
| Instruction: | If connection <id> is disconnected, returns</id> |
| | Link is not |
| For multiply connection | Param description: |
| mode | <id> ID no. of connection to close, when id=5, all</id> |
| AT+CIPCLOSE= <id></id> | connections will be closed. |
| AT+CH CLOSE=\land u | (id=5 has no effect in server mode) |
| Type: execute | Response: |
| Instruction: | OK |
| | or |
| For single connection mode | If no such connection, returns |
| AT+CIPCLOSE | ERROR |
| | Prints UNLINK when there is no connection |

6.2.5AT+CIFSR - Get local IP address

| AT+CIFSR – Get local IP address | |
|---------------------------------|-------------------------------|
| Type: Test | Response: |
| Function: | |
| Only for test. | OK |
| Instruction: | |
| AT+CIFSR=? | |
| Type: Execute | Response: |
| Function: | + CIFSR: <ip address=""></ip> |
| Get local IP address. | + CIFSR: <ip address=""></ip> |
| Instruction: | |
| | OK |
| AT+ CIFSR | ERROR |
| AITCIFSK | Param description: |
| | <ip address=""></ip> |
| | IP address of ESP8266 softAP |
| | IP address of ESP8266 station |

6.2.6AT+ CIPMUX - Enable multiple connections

| AT+ CIPMUX – Enable multiple connections or not | |
|---|---|
| Type: Query | Response: |
| Function: | + CIPMUX: <mode></mode> |
| Get param config. | |
| Instruction: | OK |
| AT+ CIPMUX? | Param description: |
| AT+ CIT MOX: | The same as below. |
| Type: Set | Response: |
| Function: | |
| Set connection mode. | OK |
| Instruction: | If already connected, returns |
| AT+ CIPMUX= <mode></mode> | Link is builded |
| A1+ CIPMOA=< mode> | Param description: |
| | <mode>0 single connection</mode> |
| | 1 multiple connection |
| Note | This mode can only be changed after all connections |
| | are disconnected. If server is started, reboot is |
| | required. |

6.2.7AT+ CIPSERVER - Configure as TCP server

| AT+ CIPSERVER - Configure as TCP server | | |
|--|--|--|
| Type: Set | Response: | |
| Function: | | |
| Set TCP server. | OK | |
| Instruction: | | |
| AT+ CIPSERVER= <mode>[,<port>]</port></mode> | Param description: | |
| | <mode> 0 Delete server (need to follow by restart)</mode> | |
| | 1 Create server | |
| | <port> port number, default is 333</port> | |
| Note | 1. Server can only be created when AT+CIPMUX=1 | |
| | 2. Server monitor will automatically be created when Server | |
| | is created. | |
| | 3. When a client is connected to the server, it will take up | |
| | one connection, be gave an id. | |
| | | |

6.2.8AT+ CIPMODE - Set transfer mode

AT+ CIPMODE – Set transfer mode

| Type: Query | Response: |
|---------------------------|---------------------------------|
| Function: | + CIPMODE: <mode></mode> |
| Query transfer mode. | |
| Instruction: | OK |
| AT+ CIPMODE? | Param description: |
| AT+ CIT MODE: | The same as below. |
| Type: Set | Response: |
| Function: | |
| Set transfer mode. | OK |
| Instruction: | If already connected, returns |
| AT+CIPMODE= <mode></mode> | Link is builded |
| A1+CIFWODE= <mode></mode> | Param description: |
| | <mode>0 normal mode</mode> |
| | 1 unvarnished transmission mode |

6.2.9AT+ CIPSTO - Set server timeout

| AT+ CIPSTO – Set server timeout | | |
|---------------------------------|--|--|
| Type: Query | Response: | |
| Function: | + CIPSTO: <time></time> | |
| Query server timeout. | | |
| Instruction: | OK | |
| AT+CIPSTO? | Param description: | |
| | The same as below. | |
| Type: Set | Response: | |
| Function: | | |
| Set server timeout. | OK | |
| Instruction: | Param description: | |
| AT+CIPSTO= <time></time> | < time> server timeout, range 0~7200 seconds | |
| AT CITOTO=\time> | | |

6.2.10 AT+ CIUPDATE – Update through network

| AT+ CIUPDATE – update through network | |
|---------------------------------------|------------------------|
| Type: execute | Response: |
| Function: | +CIPUPDATE: <n></n> |
| Start upgrade. | |
| Instruction: | OK |
| AT+ CIUPDATE | Param description: |
| | <n> 1 found server</n> |
| | 2 connect server |
| | 3 got edition |

4 start update

6.2.11 +IPD - Receive network data

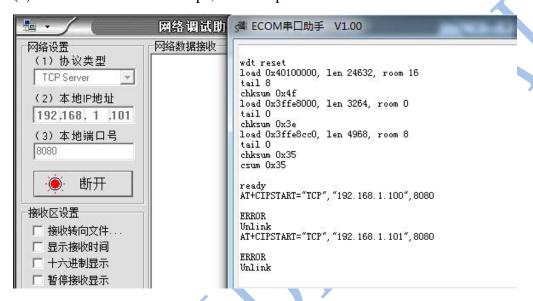

+IPD - Receive network data NOTE: 1)Single connection: When the module receives network data, it will send the data through the serial port using +IPD command (+CIPMUX=0)Param description: +IPD,<len>:<data> $\langle id \rangle$ id no. of connection data length <len> 2) Multiple connection <data> data received (+CIPMUX=1) +IPD,<id>>,<len>:<data>

7 Q&A

If you have any question about AT instructions, please contact us (support-at@espressif.com) with information as follows:

- (1) Version info of AT Using "AT+GMR" to get the version info.
- (2) Screenshot of the test steps, for example:
